

How to effectively wear masks/drapes for protection.

Masks are effective only as long as they are dry and cover the nose and mouth!

Therefore, it is necessary for them to be worn in schools and workplaces, in addition to the drape that we have on our faces, also 3 clean drapes in a clear bag. Masks can be disposable or linen. Cloth masks should be washed (or boiled) and ironed under a dry iron. One should also have a clean clear bag in stock in order to insert a used damp mask (canvas and disposable) into it.

After returning home from school, or from the workplace, throw the bag with disposable mask into the rubbish bin, wash (or boil) the linen drapes and iron them under a dry iron.
