

Higher education institution: <i>Slovak Medical University in Bratislava</i>					
Faculty: <i>Faculty of Medicine</i>					
Course code: <i>GM 044A</i>			Course title: <i>Gynaecology and Obstetrics (1)</i>		
Type, extent and method of educational activity: <i>Number of hours per semester:</i> <i>Lectures: 28/2 hours per week</i> <i>Practices: 42/3 hours per week</i>					
Number of credits: <i>3 credits</i>					
Recommended semester/trimester study: <i>9 th semester</i>					
Level of higher education study: <i>1. + 2. Level</i>					
Prerequisite courses: <i>GM 029B Surgery 2, GM 026B Internal medicine 2, GM 031B Neurology 2, GM 027B Anesthesiology and Intensive Medicine Care 2</i>					
Requirements for completion of the course: <i>Active participation in the course – continuous assessment (credits). Final Test Evaluation: A:95% -100%, B: 88% - 94% C: 77% -87%, D: 66% -76%, E: 60% - 65%. Fx: less than 60%. Student's workload is 5 hours</i>					
Learning outcomes: <i>Acquisition of theoretical knowledge and practical skills in gynaecology. The student gains the first clinical experience, contact with the patient. Obtains basic information about the examination methods in gynaecology. The student is educated in basic gynecological examination and may make the basic diagnostic methods. The student obtains basic information about, the menstrual cycle disorders, methods of contraception. The students has basic information about hematological diseases, gynaecological bleeding, menopause, malignant gynecological diseases, their diagnostics and treatment, diagnosis and treatment of urinary incontinence and pelvic floor disorders in women and the diagnosis and treatment of infertility, the immunological problems , inflammatory gynaecological diseases. gynaecological emergencies</i>					
Brief content of the course (syllabus): Gynaecology 1 <i>History of Gynecology and obstetrics. Anatomy of external and internal female reproductive organs. The development and disorders of female genital organs. Menstrual cycle. The life period of a woman. Examination methods in gynecology. The sexual life of a woman and its disorders. Planned parenthood. Methods of contraception Disorder of the menstrual cycle. Inflammatory diseases of the female reproductive organs. Endometriosis. The tumors of female reproductive organs. Breast diseases. Abnormal female genital positions. Sterility and infertility. Pediatric gynaecology. Urogynaecology. Gynaecological emergencies .Minimal invasive and radical surgical therapy in gynaecology.</i>

Course Information Sheet

Higher education institution: <i>Slovak Medical University in Bratislava</i>					
Faculty: <i>Faculty of Medicine</i>					
Course code: <i>GM 044C</i>			Course title: <i>Gynaecology and Obstetrics (3)</i>		
Type, extent and method of educational activity: <i>Number of hours per semester:</i> <i>Lectures: 15/1 hours per week</i> <i>Practices: 70 hours</i>					
Number of credits: <i>9 credits</i>					
Recommended semester/trimester study: <i>11th, 12th semesters</i>					
Level of higher education study: <i>1. + 2. level</i>					
Prerequisite courses: <i>GM 044B Gynecology and obstetrics (2), GM 051 Compulsory Summer practice-gynaecology and obstetrics</i>					
Requirements for completion of the course: <i>Preparation for the state examination. Active participation in the courses, lectures and seminars is required (credits) and necessary for the final evaluation - State Examination - consists from practical and oral examination by commission of specialists.</i>					
Learning outcomes: <i>The student acquires the theoretical knowledge and practical skills in health care of patients. Skills in basic gynaecological and obstetrical surgeries. The student gains the advanced clinical experience, contact with the patient. Obtains advanced information about fertilization and embryology, the diagnosis of pregnancy, prenatal care, the physiology and management of labour. The student obtains the information of abort and birth inductions and complications, complications in pregnancy and childbirth, diseases in pregnancy, the menstrual cycle disorders, methods of contraception, deviations in labor mechanism, specifications of multifetal pregnancy, the foetal risks during pregnancy and labour, inflammatory gynaecological diseases, gynaecological emergencies. The student is able to use the theoretical knowledge in basic gynaecological and obstetrical examination, is able to diagnose the basic pathologies in gynaecological patient and pregnant woman. The student participates at rounds and participates at clinical diagnostics and therapeutic process, assists the doctor in operating room and delivery boxes.</i>					
Brief content of the course (syllabus): <i>Work in the role of a young secondary doctor at departments. Improvement in gynecological and obstetrical propedeutics, differential diagnostics and possibilities of conservative and surgical therapy in gynecology and obstetrics. Demonstration of demanding diagnostic methods. Students assist in gynecological and obstetrical operations. In specialized offices the students acquire practical skills in the particular specialized areas of gynecology and obstetrics.</i>
